

Task:

We need design the enclosure for a small consumer electronics product. Material Is ABS. All design will be based on the shared PCB. PCB has a button, so design of the enclosure should have a possibility to push this button. Also, PCB has a battery, the possibility of changing the battery is an option, but not mandatory. Plus if the enclosure be is waterproof, but not mandatory as well.

In result we should get 3d in native and step file.
